Dear Farley,

It was a pleasure to meet you in clinic for the first time today. You came to see me because your optician thought the lens capsule had become thickened in the left eye and you might benefit from a YAG capsulotomy. In fact, the lens implant in your left eye has become cloudy. This is bothering you significantly, and after a discussion about the risks and benefits of surgery you have decided you would like to have the lens exchanged.

Your vision today measured 6/12 in the left eye with the cloudy lens implant. The lens has developed opacification, which is causing the reduced vision and visual symptoms you are experiencing.

I will arrange lens exchange surgery for your left eye. However, this is a more complex procedure than standard cataract surgery as I need to remove your existing lens implant and replace it with a new one. I will wait for your old measurement details so I can calculate the correct power for your new lens implant.

With best wishes

Yours sincerely

**Mr Luke Herbert**
